PROFESSIONAL SUMMARY

Cloud Support Engineer II and Amazon OpenSearch Service Subject Matter Expert with 4+ years keeping large-scale, distributed AWS production platforms reliable across analytics, streaming and search. I lead incident command under strict SLAs, own root cause analysis end to end, and eliminate operational toil through automation, Infrastructure as Code and AI-assisted tooling. 5x AWS Certified, including DevOps Engineer – Professional.

CORE SKILLS

Services: Amazon OpenSearch Service (SME), MSK / Apache Kafka, Kinesis, Q Business, Kendra, AppFlow, Bedrock, EC2, VPC, Lambda, CloudWatch, S3

Reliability & DevOps: Incident command, SRE (SLA/SLO, MTTR), Infrastructure Event Management, observability, root cause analysis, toil reduction, CI/CD, Infrastructure as Code (CloudFormation, CDK)

Programming & AI: Python, Bash/Linux, large-scale log analysis, GenAI / RAG for operational tooling

EXPERIENCE

Cloud Support Engineer II – Data Analytics

Jul 2026 – Present

Amazon Web Services

- Amazon OpenSearch Service SME and the analytics domain's primary escalation point: 490+ escalated production cases reviewed since 2025, plus the OpenSearch Support Operations on-call rotation.
- Lead incident command on high-severity, production-down events under strict SLAs, driving root cause to permanent fixes; recovered production domains left unhealthy for 8+ months after prior attempts had failed.
- Apply GenAI to operations: authored the OpenSearch analysis logic for a log-analysis tool that cut routine diagnosis from ~20 minutes to under 2 (~90% less toil), and can explain the method and the model design behind it.
- Engineer reliability upstream of incidents (shard-sizing, thread-pool/IOPS, JVM/memory, snapshot, blue/green change safety) and codify it into runbooks referenced in 20+ cases; mentor 10+ engineers to independent operation.
- Deliver proactive Infrastructure Event Management (IEM) - validating capacity and quotas across multi-account estates ahead of peak-traffic events (zero event-day incidents) - and turn recurring issues into product and documentation improvements adopted by service teams.

Cloud Support Engineer – Data Analytics

Nov 2023 – Jul 2026

Amazon Web Services

- Reduced mean time to resolution by 6.3% across supported workloads through global technical training that standardised troubleshooting practice.
- Automated environment replication with Infrastructure as Code (CloudFormation) – centralised logging, NGINX reverse proxies to VPC domains, ELB with ACM – turning manual setups into repeatable stacks.
- Built Support-Engineering productivity tooling with Python, AWS Lambda and retrieval-augmented generation (RAG) over an internal knowledge base.

Cloud Support Associate – Data Analytics

Jul 2022 – Nov 2023

Amazon Web Services

- Resolved all-severity cases across OpenSearch, MSK, Kinesis, AppFlow and Kendra, building independent troubleshooting depth.

- Built log-ingestion pipelines on Amazon EKS and EC2 (Fluent Bit, Logstash, Beats, Kinesis Data Firehose, Lambda) and set up CloudWatch + Elastic Stack monitoring.

SELECTED TECHNICAL WINS

- Traced intermittent broker connectivity to a hypervisor-level TCP idle-timeout, isolated from ~2.5 million MSK broker logs.
- Unblocked a ~3 million-document reindex on an OpenSearch + Bedrock embedding pipeline by correcting ingest error-handling – a 22x increase in processing throughput.
- Cut search latency (P95 ~5s) on a migrated OpenSearch workload through shard-sizing, thread-pool and IOPS tuning.
- Resolved cross-service outages spanning OpenSearch with Route 53/DNS and VPC endpoints, and AppFlow with Lambda, KMS and Secrets Manager; proved an undocumented MSK Multi-VPC failure mode by replication.

KEY ACHIEVEMENTS

- **MVP Award (2025) & Wise Guru Award (2026), AWS Support Engineering** – for automation-driven operational impact and for mentoring and enablement.
- **~90% reduction in routine OpenSearch log-analysis time** – authored the service analysis logic for a GenAI-powered diagnostics tool.
- **Enablement at scale** – 14 onboarding sessions and 5 recorded deep-dive trainings; 10+ engineers ramped to independent case handling.

CERTIFICATIONS

5x AWS Certified: DevOps Engineer – Professional, Solutions Architect – Associate, Developer – Associate, CloudOps Engineer – Associate, AI Practitioner

Accreditation: Amazon OpenSearch Service Subject Matter Expert (SME)

EDUCATION

Advanced Diploma, Information & Communication Technology (NQF 7) – Durban University of Technology, 2021

Diploma in ICT: Applications Development (NQF 6) – Durban University of Technology, 2018–2020
