Location: Cape Town, Western Cape, South Africa

Professional Summary

Cloud Support Engineer II and Amazon OpenSearch Service Subject Matter Expert with 4+ years keeping large-scale, distributed AWS production platforms reliable across analytics, streaming and search - Amazon OpenSearch Service, Amazon MSK (Apache Kafka) and Amazon Kinesis. I lead incident command on high-severity events under strict SLAs, own root cause analysis end to end, and eliminate operational toil through automation, Infrastructure as Code and AI-assisted tooling.

Primary escalation point for the analytics domain, having driven root cause on 490+ escalated production cases since 2025. I turn recurring incidents into permanent fixes - runbooks, preventive automation and reliability improvements - that measurably reduce MTTR, repeat escalations and on-call load.

5x AWS Certified, including DevOps Engineer - Professional and CloudOps Engineer - Associate, with Amazon OpenSearch Service SME accreditation. Fluent across the operational surface: incident command, observability, reliability and SLA/MTTR management, CI/CD concepts, and Infrastructure as Code (AWS CloudFormation, CDK).

WORK EXPERIENCE

July 2026 – Current

Amazon Web Services

Cloud Support Engineer II – Data Analytics

- Amazon OpenSearch Service Subject Matter Expert and the analytics domain's primary escalation point - 490+ escalated production cases reviewed since 2025 - and a member of the OpenSearch Support Operations on-call rotation.
- Lead incident command on high-severity, production-down events under strict SLAs - coordinating live customer and cross-team calls, restoring service, then driving root cause to a permanent fix. Recovered production domains left unhealthy for 8+ months after prior attempts had failed.
- Debug the hardest cross-service failures across Amazon OpenSearch Service, Amazon MSK (Apache Kafka), Kinesis, Q Business, Kendra, AppFlow and Bedrock, frequently isolating root cause from millions of log lines - for example a hypervisor-level TCP idle-timeout surfaced only after analysing roughly 2.5 million broker logs.
- Apply GenAI to operational problems: authored the OpenSearch reasoning and prompt logic for a log-analysis tool that cut routine diagnosis from about 20 minutes to under 2 (~90 percent less toil), and can explain both the diagnostic method and the model design behind it.

- Engineer reliability upstream of incidents - shard-sizing, thread-pool and IOPS tuning, JVM and memory-pressure remediation, snapshot recovery and blue/green change safety - and codify each pattern into runbooks now referenced in 20+ subsequent cases.
- Deliver proactive Infrastructure Event Management (IEM): validate service capacity and quotas across multi-account customer estates ahead of peak-traffic events, and advise on managed-vs-self-managed and scaling trade-offs - contributing to zero event-day incidents.
- Turn recurring customer issues into product and documentation improvements and feature requests adopted by service teams; mentor 10+ engineers to independent operation and deliver 14 onboarding sessions plus 5 recorded deep-dive trainings.

November 2023 – July 2026

Amazon Web Services

Cloud Support Engineer – Data Analytics

- Delivered production support across all severities for AWS analytics and streaming platforms - Amazon OpenSearch Service, Amazon MSK (Apache Kafka) and Amazon Kinesis - and led critical production-down conference calls to restore service.
- Owned high-severity incident response and service recovery under strict SLAs, performing root cause analysis and shipping preventive automation to stop recurrence.
- Reduced mean time to resolution by 6.3% across supported workloads by designing and delivering global technical training that standardised troubleshooting practice.
- Automated environment replication with Infrastructure as Code (AWS CloudFormation) - centralised logging, NGINX reverse proxies to VPC-based domains, and Elastic Load Balancing with ACM certificates - converting repeated manual setups into repeatable, reviewable stacks.
- Built Support-Engineering productivity tooling with Python, AWS Lambda and retrieval-augmented generation (RAG) over an internal knowledge base to speed resolution.
- Partnered with Solutions Architects and enterprise customers on architecture reviews, reliability guidance and enterprise GenAI enablement workshops for large-scale analytics workloads.

July 2022 – November 2023

Amazon Web Services

Cloud Support Associate – Data Analytics

- Resolved enterprise support cases across all severities within SLA, building independent troubleshooting depth across Amazon OpenSearch Service, OpenSearch Serverless and Ingestion, MSK, AppFlow, Kendra and the Kinesis family.
 - Supported cloud-native analytics and streaming platforms across Amazon EC2, IAM, VPC, CloudWatch and S3.
 - Replicated customer distributed environments to reproduce and troubleshoot complex infrastructure and application-performance issues, including Amazon Cognito and SAML authentication flows.
 - Built log-ingestion pipelines on Amazon EKS and EC2 using Fluent Bit, Logstash, Beats, Kinesis Data Firehose and AWS Lambda.
 - Performed operational reviews to identify recurring failure patterns and drive reliability improvements, and supported migrations and capacity planning.
 - Set up monitoring and logging with Amazon CloudWatch and the Elastic Stack (ELK) to improve system visibility and performance.
 - Advised customers on AWS best practices - data security, fault tolerance, scaling design and performance optimisation.
-

ACHIEVEMENTS & RECOGNITION

Most Valuable Player (MVP) Award – AWS Engineering –

<https://www.credly.com/badges/3cda5544-8495-45b0-a105-f95b2e9b8ad1/>
linked in profile

Selected among top-performing engineers for consistently raising team performance standards through exceptional productivity, quality, and technical leadership. Recognized for delivering automation-driven operational improvements and leading recovery of high-severity production incidents across enterprise AWS analytics environments.

Wise Guru Award – AWS Engineering –

<https://www.credly.com/badges/a1576436-1f3a-4e9f-9fd5-deodece3cf73>

Recognized as a key technical mentor and knowledge leader for designing and delivering structured training and onboarding programs. Mentored 10+ engineers, improving incident response effectiveness and contributing to reductions in escalation frequency.

Automation & Operational Efficiency Impact

Designed and authored the Amazon OpenSearch Service analysis logic for a GenAI-powered log-analysis tool, spanning cluster health, indexing, search, security, networking and ingestion diagnostics. Validated against real-world scenarios, it reduced routine log-analysis time by roughly 90 percent, from about 20 minutes to under 2 minutes per case, accelerating incident diagnosis across distributed production environments.

Global Technical Enablement Contribution

Delivered 14 new-hire onboarding sessions and 5 recorded deep-dive trainings across Amazon OpenSearch Service and Amazon Q Business, drawing 30+ live attendees and enabling 10+ engineers to handle Amazon Q Business cases independently. This enablement also contributed to a measurable 6.3% reduction in MTTR across supported workloads.

Enterprise Customer Enablement & Technical Leadership

Collaborated with Solutions Architects and engineering teams to deliver enterprise GenAI workshops demonstrating real-world automation use cases, enabling customer adoption of AI-driven cloud solutions.

CERTIFICATIONS

AWS Certifications

- AWS Certified DevOps Engineer – Professional (DOP-Co2)
 - <https://www.credly.com/badges/7f7focdd-obof-49c3-9328-0e39d2070bcc>
- AWS Certified Solutions Architect – Associate (SAA-Co3)
 - <https://www.credly.com/badges/e919c4b2-5106-4326-bacc-e57f5d2a536a>
- AWS Certified Developer – Associate (DVA-Co2)
 - <https://www.credly.com/badges/ee492409-4380-41a6-a4f7-319c3bc3718d>
- AWS Certified CloudOps Engineer – Associate (SOA-Co3)
 - <https://www.credly.com/badges/2739dd31-fe7c-4618-a334-185cc45554a8>
- AWS Certified AI Practitioner (AIF-Co1)
 - <https://www.credly.com/badges/51461b70-ddc3-438f-87e6-66320920fc80>

- AWS OpenSearch Subject Matter Expert (SME)
 - <https://www.credly.com/badges/ce91a913-2a3e-4196-bd33-84757d6033be>

Networking & Security Foundations

- Cisco Networking Academy – Introduction to Cybersecurity
 - Cisco Networking Academy – Networking Essentials
 - Cisco Networking Academy – NDG Linux Unhatched
 - Cisco Networking Academy – Introduction to IoT
-

EDUCATION

2021

ADVANCED DIPLOMA: INFORMATION AND COMMUNICATION TECHNOLOGY,
Durban University of Technology
NQF Level 7

2018 - 2020

Diploma in ICT: Applications Development,
Durban University of Technology
NQF Level 6

SKILLS

AWS Cloud Computing Services

- **Streaming & Data Processing:** Amazon MSK, Amazon Kinesis
- **Search, AI & GenAI:** Amazon OpenSearch Service, Amazon Kendra, Amazon Q Business, Amazon Bedrock
- **Integration & Automation:** AWS AppFlow, AWS Lambda
- **Infrastructure as Code & Automation:** AWS CloudFormation, CDK
- **Compute:** Amazon EC2
- **Networking & Load Balancing:** Amazon VPC, Elastic Load Balancing
- **Monitoring & Observability:** Amazon CloudWatch, AWS CloudTrail
- **Security & Identity:** AWS IAM, AWS KMS
- **Storage:** Amazon S3, Amazon EBS

Reliability & DevOps Practices

- Site Reliability Engineering - SLA/SLO management, MTTR reduction, error-budget thinking
- CI/CD concepts and deployment automation
- Incident response, incident command and blameless postmortems
- Monitoring, observability and logging strategy
- Infrastructure as Code - AWS CloudFormation, AWS CDK
- Root cause analysis, preventive controls and toil reduction

Programming & Scripting

- Python (automation, tooling, AI/RAG) and Bash / shell scripting on Linux

Engineering Concepts

- Distributed systems, high availability & fault tolerance; data pipelines & stream processing (Apache Kafka/MSK, Kinesis); GenAI/RAG for operations
