Open to international relocation – Ireland, Germany, Netherlands, UK, Australia, UAE | visa sponsorship welcome

PROFESSIONAL SUMMARY

AWS Cloud and Site Reliability engineer with 4+ years keeping large-scale, distributed AWS production platforms reliable across analytics, streaming and search – Amazon OpenSearch Service, Amazon MSK (Apache Kafka) and Amazon Kinesis. Primary Amazon OpenSearch Service Subject Matter Expert and analytics-domain escalation point, having driven root cause on 490+ escalated production incidents since 2025. I lead incident command under strict SLAs, own root cause analysis end to end, and cut operational toil through automation, Infrastructure as Code and AI-assisted tooling – including GenAI/RAG diagnostics that reduced routine log analysis by roughly 90%. 5x AWS Certified, including DevOps Engineer – Professional.

TECHNICAL SKILLS

AWS Services: Amazon OpenSearch Service (SME) & Elasticsearch, Amazon MSK / Apache Kafka, Kinesis, Lambda, EC2, VPC & VPC endpoints (PrivateLink), Route 53, ELB, ACM, KMS, Secrets Manager, CloudWatch, S3, EKS, Bedrock, Q Business, Kendra, AppFlow

Reliability & SRE: Incident command & response, SLA/SLO & MTTR management, Infrastructure Event Management, observability & monitoring, root cause analysis, capacity planning, performance tuning, on-call operations

DevOps & Automation: Infrastructure as Code (AWS CloudFormation, AWS CDK), CI/CD, Python, Bash / Linux, toil reduction, blue/green change safety

Distributed Systems & Streaming: Distributed-systems troubleshooting, Apache Kafka / MSK, Kinesis, stream processing, log-ingestion pipelines (Fluent Bit, Logstash, Beats, Data Firehose), Elastic Stack (ELK)

AI for Operations: GenAI, retrieval-augmented generation (RAG), large-scale log analysis, AI-assisted diagnostics

EXPERIENCE

Cloud Support Engineer II – Data Analytics

Jul 2026 – Present

Amazon Web Services

- Amazon OpenSearch Service SME and the analytics domain's primary escalation point – 490+ escalated production incidents driven to root cause since 2025 – and a member of the OpenSearch Support Operations on-call rotation.
- Lead incident command on high-severity, production-down events under strict SLAs: coordinate live customer and cross-team bridges, restore service, then drive root cause to a permanent fix. Recovered production domains left unhealthy for 8+ months after prior attempts had failed.
- Debug the hardest cross-service failures across Amazon OpenSearch Service, MSK (Apache Kafka), Kinesis, Q Business, Kendra, AppFlow and Bedrock, frequently isolating root cause from millions of log lines.
- Apply GenAI to operations – authored the OpenSearch reasoning and prompt logic for a log-analysis tool that cut routine diagnosis from about 20 minutes to under 2 (~90% less toil).
- Engineer reliability upstream of incidents – shard-sizing, thread-pool and IOPS tuning, JVM and memory-pressure remediation, snapshot recovery and blue/green change safety – codified into runbooks referenced in 20+ subsequent cases; mentor 10+ engineers to independent operation.
- Run proactive Infrastructure Event Management (IEM): validate service capacity and quotas across multi-account customer estates ahead of peak-traffic events (zero event-day incidents), and turn recurring issues into product and documentation improvements adopted by service teams.

Cloud Support Engineer – Data Analytics

Nov 2023 – Jul 2026

Amazon Web Services

- Owned high-severity incident response and service recovery under strict SLAs across Amazon OpenSearch Service, MSK (Apache Kafka) and Kinesis, performing root cause analysis and shipping preventive automation to stop recurrence.
- Automated environment replication with Infrastructure as Code (AWS CloudFormation) – centralised logging, NGINX reverse proxies to VPC-based domains, and Elastic Load Balancing with ACM certificates – turning repeated manual setups into repeatable, reviewable stacks.
- Reduced mean time to resolution by 6.3% across supported workloads through global technical training that standardised troubleshooting practice; built Support-Engineering productivity tooling with Python, AWS Lambda and RAG over an internal knowledge base.

Cloud Support Associate – Data Analytics

Jul 2022 – Nov 2023

Amazon Web Services

- Resolved all-severity cases across Amazon OpenSearch Service, OpenSearch Serverless & Ingestion, MSK, AppFlow, Kendra and the Kinesis family, building independent distributed-systems troubleshooting depth.
- Built log-ingestion pipelines on Amazon EKS and EC2 (Fluent Bit, Logstash, Beats, Kinesis Data Firehose, Lambda) and set up CloudWatch + Elastic Stack (ELK) monitoring; replicated customer environments including Amazon Cognito / SAML (Okta) authentication flows.

SELECTED ENGINEERING ACHIEVEMENTS

- **22x increase in processing throughput** – unblocked a ~3 million-document reindex on an Amazon OpenSearch Service + Bedrock embedding pipeline by correcting ingest error-handling.
- **Search latency cut (P95 ~5s)** – on a migrated OpenSearch workload, through shard-sizing, thread-pool and IOPS tuning.
- **Root cause from ~2.5 million log lines** – isolated a hypervisor-level TCP idle-timeout behind intermittent Kafka broker connectivity.
- **Cross-service outage resolution** – spanning OpenSearch with Route 53/DNS and VPC endpoints, and AppFlow with Lambda, KMS and Secrets Manager; proved an undocumented MSK Multi-VPC failure mode by replication.

AWARDS & TECHNICAL LEADERSHIP

- **MVP Award (2025) & Wise Guru Award (2026), AWS Support Engineering** – for automation-driven operational impact and for mentoring and enablement.
- **Technical enablement at scale** – delivered 14 onboarding sessions and 5 recorded deep-dive trainings (30+ live attendees); ramped 10+ engineers to independent case handling.

CERTIFICATIONS

5x AWS Certified: DevOps Engineer – Professional, Solutions Architect – Associate, Developer – Associate, CloudOps Engineer – Associate, AI Practitioner

Accreditation: Amazon OpenSearch Service Subject Matter Expert (SME)

Foundations: Cisco Networking Academy – Networking Essentials, Introduction to Cybersecurity, Introduction to IoT, Linux Unhatched

EDUCATION

Advanced Diploma, Information & Communication Technology (NQF 7, bachelor's-degree level) – Durban University of Technology, 2021

Diploma in ICT: Applications Development (NQF 6) – Durban University of Technology, 2018–2020
